

Strategic Partner Register

From Wildfires to Regeneration Framework

INTERNAL WORKING DOCUMENT

Supporting the Framework requires more than financial sponsorship. It requires a carefully selected network of Strategic Partners capable of providing the specialist expertise, engineering, technology, products and operational capability needed to establish the first fully integrated deployment.

No single organisation can deliver the Framework independently. However, collectively, the organisations identified within this register provide the core capabilities required to move from concept to implementation.

Each organisation has been selected not only for its technical capability, but also for its long-term vision, organisational values, engineering excellence and ability to contribute meaningfully to the Framework beyond conventional sponsorship.

Together, these Strategic Partners represent the foundation upon which the first operational deployment can be delivered.

01

Environmental Intelligence

STRATEGIC PARTNER

CMCC Foundation

LOCATION

Lecce, Puglia, Italy

OWNERSHIP

Foundation

APPROXIMATE SCALE

Approximately 700 staff.

WHY SELECTED

CMCC is internationally recognised for its expertise in climate science, wildfire modelling and environmental intelligence. Its presence in Lecce provides the Framework with immediate scientific credibility while maintaining a strong regional connection. Although not a commercial organisation, CMCC's contribution is considered fundamental to the Framework's scientific integrity.

FRAMEWORK CAPABILITY

- Climate modelling
- Wildfire prediction
- Environmental intelligence
- Scientific validation
- Data analysis
- Long-term environmental monitoring

02

Early Detection Systems

STRATEGIC PARTNER

Dryad Networks

LOCATION

Berlin, Germany

OWNERSHIP

Private

APPROXIMATE SCALE

Approximately 100 employees.

WHY SELECTED

Dryad Networks has developed one of the world's leading AI-powered early wildfire detection systems. Their technology aligns directly with the preventative philosophy of the Framework, enabling fires to be detected at their earliest possible stage before they develop into major incidents.

FRAMEWORK CAPABILITY

- AI wildfire detection
- Autonomous sensor networks
- Thermal detection

- Environmental monitoring
- Early warning systems

03

Wildfire Drone Systems

STRATEGIC PARTNER

Hightek

LOCATION

Castel San Giorgio (Salerno), Italy

OWNERSHIP

Private

APPROXIMATE SCALE

Specialist engineering company.

WHY SELECTED

Hightek develops operational technology specifically for wildfire response rather than general drone applications. Their Q.Fly platform integrates thermal imaging, live operational mapping and wildfire intelligence, providing a highly adaptable aerial capability that can continue to evolve alongside the Framework.

FRAMEWORK CAPABILITY

- Wildfire drone technology
- Thermal imaging
- Live operational mapping
- Fire intelligence
- Aerial operational support
- Future integration with additional aerial platforms

04

Observation Structures

STRATEGIC PARTNER

Rubner Group

LOCATION

Chienes (Kiens), South Tyrol, Italy

OWNERSHIP

Private – Family Owned

APPROXIMATE SCALE

Approximately 1,500 employees.

Annual turnover approximately €417 million.

WHY SELECTED

Rubner represents one of the Framework's most significant Strategic Partners. Their expertise extends beyond timber construction to include architecture, structural engineering, manufacturing and turnkey construction. Their long-term family ownership, engineering excellence and commitment to sustainable construction make them an outstanding cultural and technical fit.

FRAMEWORK CAPABILITY

- Observation tower design
- Structural timber engineering
- Sustainable construction systems
- Prefabricated structures
- Manufacturing
- Architectural support
- Engineering expertise

Strategic Contribution

Rubner has the potential to become the Framework's Signature Infrastructure Partner, delivering the physical structures that become the visible identity of the project.

05

Structural Engineering & Steel

STRATEGIC PARTNER

Marcegaglia

LOCATION

Headquarters: Gazoldo degli Ippoliti (Mantua), Italy

Major Operations: Taranto, Puglia

OWNERSHIP

Private – Family Owned

APPROXIMATE SCALE

Approximately 7,800 employees.

Annual turnover approximately €7.5 billion.

WHY SELECTED

Marcegaglia combines world-class engineering capability with the agility and long-term perspective of a privately owned family business. Their manufacturing capacity, engineering expertise and significant presence in southern Italy make them an ideal strategic partner for structural infrastructure.

FRAMEWORK CAPABILITY

- Structural steel
- Fabrication
- Engineering
- Infrastructure components
- Manufacturing support

Strategic Contribution

Marcegaglia provides the structural engineering capability required to support large-scale infrastructure throughout the Framework.

06

Communications Infrastructure

STRATEGIC PARTNER

SIAE Microelettronica

LOCATION

Cologno Monzese (Milan), Italy

OWNERSHIP

Private

APPROXIMATE SCALE

Approximately 500–1,000 employees.

WHY SELECTED

SIAE Microelettronica is an internationally respected engineering company specialising in resilient wireless communications infrastructure. Their expertise provides the secure operational communications required to support a distributed environmental protection network.

FRAMEWORK CAPABILITY

- Mission-critical communications
- Wireless infrastructure
- Remote connectivity
- Operational communications
- Network resilience

Strategic Contribution

SIAE provides the communications backbone that enables every operational component of the Framework to function as one integrated system.

07

Landscape Management & Ecological Regeneration

STRATEGIC PARTNER

Technoforest

LOCATION

Zanica (Bergamo), Italy

OWNERSHIP

Private – Family Owned

APPROXIMATE SCALE

Specialist engineering company.

WHY SELECTED

Technoforest combines practical ecological expertise with long-term landscape management experience. Their knowledge supports the regenerative principles of the Framework while providing practical methodologies for landscape restoration and environmental resilience.

FRAMEWORK CAPABILITY

- Hugelkultur design
- Hugelkultur construction
- Landscape regeneration
- Vegetation management
- Ecological restoration methodology
- Technical knowledge transfer

Strategic Contribution

Technoforest provides the expertise needed to establish regenerative landscape systems before knowledge is progressively transferred to local implementation teams.

08

Renewable Energy & Off-Grid Power

STRATEGIC PARTNER

Victron Energy

LOCATION

Almere, Netherlands

OWNERSHIP

Private

APPROXIMATE SCALE

International engineering company.

WHY SELECTED

Victron Energy is recognised internationally for reliable off-grid energy systems operating in demanding environments. Their products provide the resilient energy infrastructure required to support autonomous installations throughout the Framework.

FRAMEWORK CAPABILITY

- Solar integration
- Battery storage
- Remote power systems
- Energy resilience
- Off-grid infrastructure

Strategic Contribution

Victron Energy enables the Framework to operate independently of conventional infrastructure wherever necessary.

09

Water Systems & Pumping Infrastructure

STRATEGIC PARTNER

Xylem

LOCATION

European Operations

OWNERSHIP

Public

APPROXIMATE SCALE

Global engineering organisation.

WHY SELECTED

Although publicly listed, Xylem remains one of the world's leading engineering companies specialising in water management. Their expertise provides the capability required to develop resilient water infrastructure supporting both wildfire prevention and operational response.

FRAMEWORK CAPABILITY

- Water storage
- Pumping systems
- Remote water infrastructure
- Water engineering
- Fluid management

Strategic Contribution

Xylem provides the water management capability that underpins long-term resilience across the Framework.

10

Natural Building Materials

STRATEGIC PARTNER

CELENIT S.p.A.

LOCATION

Tombolo (Padua), Italy

OWNERSHIP

Private

APPROXIMATE SCALE

Established international manufacturer.

WHY SELECTED

CELENIT is a long-established Italian manufacturer specialising in sustainable construction materials and ecological insulation systems. Their industrial capability,

manufacturing quality and commitment to environmentally responsible construction make them an ideal strategic partner.

FRAMEWORK CAPABILITY

- Natural construction materials
- Sustainable insulation systems
- Ecological building products
- Industrial manufacturing
- Sustainable construction support

Strategic Contribution

CELENIT provides the sustainable construction materials required to ensure the Framework remains environmentally responsible throughout its physical development.

11

Command & Control Platform

STRATEGIC PARTNER

Hexagon Safety, Infrastructure & Geospatial

LOCATION

European Operations

OWNERSHIP

Public

APPROXIMATE SCALE

International technology group.

WHY SELECTED

Hexagon develops internationally recognised command, control and operational management platforms used throughout critical infrastructure and emergency response environments. Their technology has the potential to become the digital operational backbone of the Framework.

FRAMEWORK CAPABILITY

- Incident management
- Operational dashboard
- Resource coordination
- Fleet management

- Decision support

Strategic Contribution

Hexagon enables the Framework to coordinate people, infrastructure and operational resources through a single integrated management platform.

12

GIS & Environmental Mapping

STRATEGIC PARTNER

Esri Italia

LOCATION

Rome, Italy

OWNERSHIP

Private

APPROXIMATE SCALE

Leading GIS organisation.

WHY SELECTED

Esri Italia provides world-leading geographic information system technology. Interactive mapping will become central to operational planning, wildfire monitoring, environmental analysis and the long-term measurement of regeneration across the Framework.

FRAMEWORK CAPABILITY

- GIS
- Interactive mapping
- Operational planning
- Environmental visualisation
- Regeneration monitoring

Strategic Contribution

Esri enables the Framework to visualise, analyse and communicate environmental information through a single intelligent mapping platform.

CONCLUSION

Collectively, these Strategic Partners provide the principal capabilities required to establish the first operational deployment of the Framework.

Rather than functioning as individual suppliers, each organisation contributes a specialist capability that strengthens the overall system. Together they provide the engineering, technology, environmental expertise, infrastructure, communications and operational intelligence necessary to transform the Framework from concept into reality.

This collaborative approach establishes a scalable model capable of protecting, restoring and regenerating landscapes while creating a practical foundation for long-term environmental resilience.
